FABRIC PROJECT · FABRIC JOURNEY · STEP 4 OF 4

Your first Fabric use case. **In production.**

Our experts implement your first Fabric use case with you so that you can then use the solution productively – for example from sales, HR, finance or marketing. In the process, the foundation is created on which you build further use cases.

AT A GLANCE

In the Fabric Project, Obungi implements the first use case in Microsoft Fabric for production together with the company. The scope includes the requirements analysis, the setup and configuration of Fabric, the implementation of one use case – for instance from sales, HR, finance or marketing –, a security and permission concept as well as project management, testing and documentation. The result is a production-ready solution with go-live and the foundation for future extensions.

SERVICE	Fabric Project
PROVIDER	Obungi GmbH, Microsoft Fabric Featured Partner
FORMAT	Implementation project with Obungi experts
DURATION	Depends on the use case
FOR WHOM	Companies that have defined their first Fabric use case
RESULT	Production-ready & go-live, Foundation for extensions, A documented solution
PART OF	Microsoft Fabric Journey

STARTING POINT

When this step **is the right one.**

Have you defined your first Fabric project and need support with the implementation?

01

The use case is defined

You know what you want to achieve with Fabric first – now it is about the implementation.

02

It should be right from the start

The first solution shapes everything that follows: architecture, permissions and way of working.

03

The team lacks experience

Your team knows the data but not yet the platform. We bring the Fabric experience.

SCOPE

What **is included.**

- ✓ Requirements analysis
- ✓ Setup and configuration of Fabric
- ✓ Implementation of one use case, e.g. from sales, HR, finance or marketing
- ✓ Security and permission concept
- ✓ Project management, testing and documentation

Fabric Featured Partner

- Involved in the development of Microsoft Fabric even before the official launch
- Direct contact with the Microsoft Fabric development team
- More than 80 successfully completed Fabric projects

Fabric Featured Partner

Obungi is a Microsoft Fabric Featured Partner.

PROCESS

Three steps **to the result.**

01

Requirements & setup

Phase 1

- Requirements analysis
- Setup and configuration of Fabric
- Security and permission concept

02

Implementation

Phase 2

- Implementation of your use case
- Accompanying project management

03

Testing & go-live

Phase 3

- Testing and documentation
- Go-live and handover

Discuss your project →

RESULT

What you **have at the end.**

Production-ready & go-live

You then use the solution productively.

Foundation for extensions

Platform, permissions and approach are in place – further use cases build on them.

A documented solution

Tested and documented so that your team can operate and develop it further.

MICROSOFT FABRIC JOURNEY

One step on **your way to Fabric.**

The steps build on each other but can also be booked individually. You start where you currently are.

STEP 1

Intro call

Free of charge

STEP 2

Fabric Solution Assessment

Three workshops to your Fabric data strategy: target architecture, cost estimate and roadmap.

STEP 3

Fabric Test Drive

Try Fabric for 60 days with a trial licence – accompanied by our experts on a test use case.

STEP 4 YOU ARE HERE

Fabric Project

Your first Fabric use case, implemented for production – with security concept, testing and documentation.

FAQ

Frequently asked questions about the **Fabric Project**

What is the Fabric Project?

The productive implementation of your first use case in Microsoft Fabric together with Obungi – from the requirements analysis to setup and implementation through to testing, documentation and go-live.

Which use cases are suitable to start with?

Clearly defined use cases from one business department, for example from sales, HR, finance or marketing.

Do we have to replace existing systems or switch everything at once?

No. Fabric can be introduced step by step: you start with prioritised use cases and build on them. Existing source systems and Power BI models remain usable.

What do we have after the project?

A production-ready solution that has gone live and the foundation for future extensions.

GET STARTED

Request the **Fabric Project.**

Tell us briefly where you stand. We will get back to you with a suggested date – if you wish, for the free intro call first.
